Myopenmath answers reddit

Hey y'all finally succumbed and bought a chegg subscription if you need some answers let me know and I can get it to you! You can also check out [textsheet.com](https://www.textsheet.com) for answers... but the chegg market is just much simpler tbh. I ask for your suggestions in an app to use as I'm not having much luck in my research. Here's what I need in this app.... students can create their own account can create personalized, (differentiated) work for my studentsapp work classes and monitor the cumulative scoreapp provides videos or links to help with the content that students working onstudents can contact me via message via apprentices can set up an account to track their child Knowledge high school algebra 1 and 2. Thank you for your help. Page 2 23 comments I realized that many of the services my site pays for revolves around tons of math problems in my beck and call. We use IXL, i-Ready, Infinite Algebra, and some others. If there was an open set of mathematical problems that had an API, you could just tap into that set and ask for a problem. Users could vote above or below the problems and actually use them where they need them. Imagine a warm-up add-on in Google Slides or another add-on to dynamically create a practice page. Does anyone know something like this that already exists? Has anyone used myopenmath.com extensively for self-made? Is it the content of high quality? How does it compare to something like Han Academy? Is it worth investing time or am I better off using other resources? Hi! When my school used engrade, there was a way to create questions like this: $x^2 - (b)x + (c) = 0$ Answer: $x = \{ans\}$ Then create a table like this:... and so on, with the table any size. Then students will get the question with a random set of numbers from the board. For example, one student will get $x^2 - 6x + 9 = 0$, another will get $x^2 - 8x + 16 = 0$, etc. The idea is - different numbers, same process. Students can help each other with the process, but they can't just share answers. Especially useful for statistics or types of physical problems, in my experience. Anyway, I'm trying to find something like this after he's gone. I do not mind creating my own server in order to achieve this. The closest thing I've found is Calculated questions about moodle, which might work, but I'm still looking to see if I can find something like that. Can anyone tell me about a platform that works well for these guys 50 of my 142 children have failed in the last six weeks. I teach regular high school. I think I make my class relatively easy to pass, if just turn in the minimum amount of work I have to do. 50% of the time they have enough time to finish it in class. The thing is, I'm not sure if I'm giving them enough work or too much. I feel like I'm stuck between a rock and a hard place. If I teach them too many lessons, they won't deliver it. If I don't give them enough practice then they don't get the skills they need to do well. Plus I have about 15% of students who just copy work from their friends at the last minute thinking they'll learn something. I need some suggestions to A) reduce cheating B) get higher test scores and C) have students really turn to work on timePage 2 15 comments Preview Pay Someone to offer you MyOpenMath MyOpenMath answers is a free, open source, online course management system for professionals or students who want to learn math. The platform's primary goal is to facilitate the creation and implementation of online math work and evaluation. If you are a professional or student looking to study mathematics on your own using free textbooks and complete math assignments with instant feedback, then MyOpenMath may be the best online course management platform for you.
